

Training Program

CTSpec Sewer: Infrastructure Analysis and Management

This training session is aimed at not only municipalities but also consulting engineer firms and specialized services supporting the management of infrastructure. Engineers and other municipal service managers are responsible for planning, supervising and co-ordinating post-inspection follow-up work, such as cleaning, inspection by drawn camera and the replacement or rehabilitation of infrastructure. The proposed approach explores the development of an action plan with workable priorities for renewing sewer pipes and updating assets.

The main themes to be explored are:

- CTSpec system to recognize CAD assets
- Standard and modified databases
- Assets inventory/Use of the viewer
- Multilayered plan creation and access
- Asset creation and modification
- Thematic reports
- Customized reports
- Editing of queries
- Editing of work orders
- Editing of thematic plans
- Query modification/archiving
- Updates of assets by lot or individually
- Creation of project/supplier histories

Objectives

This training activity will enable participants to import, validate, modify and update inspection data and to follow up billing. It will cover the use and modification of software parameters for sound operational and budgetary management of networks.
